The next generation of hotel locks

The Hotek Generation-Z lock is the hotel lock of the future. The locks have an online cloud connection and work according to **IoT (internet of things)** technology. Access rights for guests and staff are stored on the lock, which enables **realtime online management of access rights**. A late arrival or last minute room swap can easily be handled online, from any location. A staff member that needs to have immediate access to a room or office? No problem. Blocking access straight away? Same story.

Next to your guests and housekeeping, your technical service profits by the benefits; in case of updates or adjustments, there is no need to access the locks on location, but **updates can be done 'over the air'**. Another great advantage: online monitoring of the battery status. See which batteries need to be replaced in the software.

The design reader has been developed with a **hybrid function**, and can read both cards (**RFID, Mifare, NFC and DESfire**) as well as **QR- and barcodes**. Besides cards and codes, the locks can also be opened with any type of smartphone. The **mobile key** function can be used with or without an app.

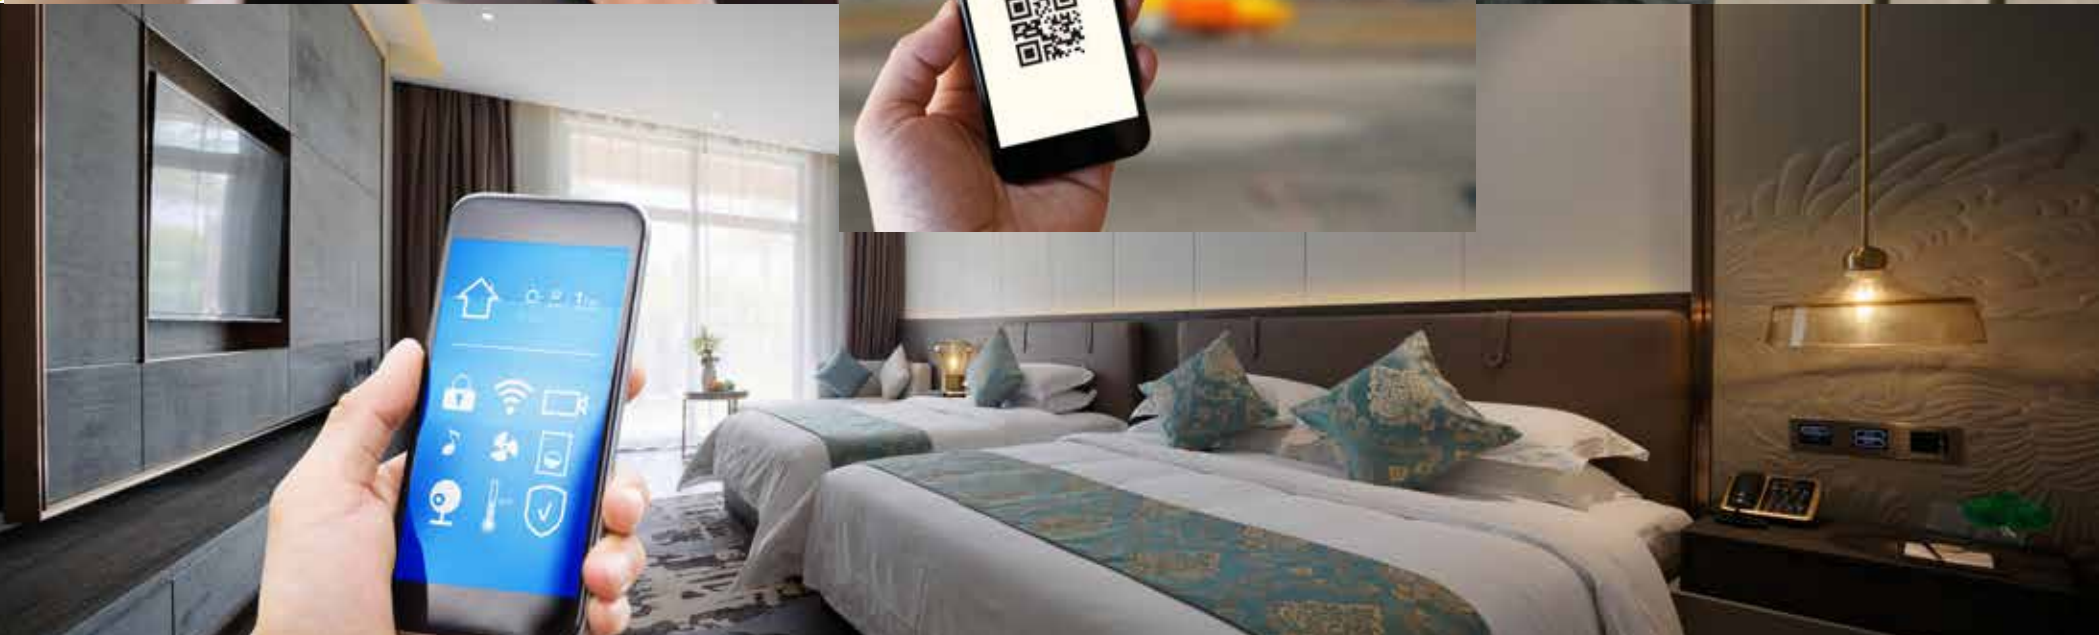

We offer flexibility for both your staff and guests, and you can choose the options that fit your style. Whether it's a hostel with several guests in one room, an urban business hotel for millennials or a family boutique hotel, we always have a solution that meets your requirements. And Generation-Z? In 2020 40% of the largest world markets consists of this generation, and in the 21st century they will be your guests, that are always online! **Are you ready? We are!**

The benefits

- online access control, data on lock
- cloud based, end-to-end encryption
- unique hybrid reader
- stylish design lock
- powerful code reader
- opens with cards, codes & mobile key
- card types: RFID, Mifare, NFC, Desfire
- integrates with staff passes from other systems
